

CATPUNK

CATPUNK Token & Ecosystem Whitepaper

Version 1.1 — August 2026

A community-focused digital asset project built around the CatPunk identity, transparent tokenomics, long-term supply controls, and gradual ecosystem development.

TOKENOMICS

Total Supply	
1,000,000,000 CATPUNK	100%
Liquidity Allocation	
1,000,000,000 CATPUNK	100%

The complete CATPUNK supply is allocated to liquidity.

1. Executive Summary

CatPunk is a community-oriented digital asset project built around a recognizable cat-punk identity, transparent tokenomics, and a long-term ecosystem approach.

This structure is designed to avoid an immediate release of the majority of the supply and to make the intended supply schedule easier for the community to understand and verify.

2. Vision

CatPunk aims to build a recognizable community brand in the digital-asset space while maintaining clear, understandable, and verifiable tokenomics.

The long-term vision is to develop CatPunk from a token identity into a broader community ecosystem supporting digital collectibles, community campaigns, creative content, events, and future utilities where technically and economically appropriate.

3. Mission

The mission of CatPunk is to prioritize community participation, transparent supply management, responsible development, and long-term ecosystem growth rather than short-term hype.

The project will emphasize public documentation, clear communication, verifiable on-chain information, and incremental product development.

4. Token Overview

Token name: CatPunk

Ticker: CATPUNK

Maximum total supply: 1,000,000,000 CATPUNK.

5. Tokenomics

CatPunk uses a deliberately simple allocation model.

pool address and on-chain information should be published when the pool is launched.

No initial liquidity funding amount is specified in this public whitepaper.

verified lock mechanism.

assuming the stated linear schedule is implemented exactly.

records so users can verify the schedule independently.

7. Liquidity Principles

Liquidity is a core component of a tradable token ecosystem. CatPunk intends to provide a dedicated token allocation for liquidity and maintain transparent information about the relevant pool.

Liquidity can change in effective market value as users trade. A liquidity allocation is not a guarantee that a particular monetary value of liquidity will remain available at all times.

Users should independently evaluate liquidity depth, price impact, pool ownership, and transaction conditions before trading.

8. Trading Fees

Trading fees are determined by the decentralized exchange and pool configuration used by CatPunk. Token supply alone does not determine an AMM's swap fee.

Where a standard AMM pool is used, the exchange protocol rules govern swap-fee collection and distribution. CatPunk will not describe exchange-level fees as guaranteed project revenue unless a

separate, explicit, and verifiable mechanism provides such revenue.

9. Ecosystem Direction

Potential ecosystem directions include community campaigns, digital collectibles, NFT integrations, social experiences, token-gated activities, and other applications developed responsibly.

Future utilities will be introduced when technical implementation, user experience, and economic design are sufficiently mature. Roadmap items are targets, not guarantees.

10. Community

Community participation is fundamental to CatPunk. The project aims to encourage creative contributions, social content, community events, educational resources, and transparent updates.

Community members should verify official contract addresses and project links before connecting wallets or interacting with any service claiming to represent CatPunk.

11. Security & Transparency

Security begins with minimizing unnecessary contract complexity and clearly communicating token,

seed phrases, or wallet recovery information.

Official addresses and links should be published through verified project channels to reduce the risk of impersonation.

12. Development Principles

CatPunk development follows transparency, simplicity, incremental delivery, user safety, and verifiable on-chain information.

schedule should be communicated clearly and supported by verifiable information.

13. Roadmap

Phase 1 — Foundation: establish CatPunk branding, website, token documentation, public tokenomics, and core community channels.

Phase 2 — Launch: deploy the token and liquidity infrastructure, publish verifiable contract and pool

Phase 3 — Community Growth: expand community campaigns, content, social presence, digital collectible concepts, and ecosystem tools.

Phase 4 — Ecosystem Expansion: develop useful community features, explore NFT integrations, partnerships, creative collaborations, and broader ecosystem integrations.

available.

based on community demand, technical feasibility, transparency, and sustainability.

14. Governance & Project Decisions

CatPunk may evolve through community feedback and development decisions. Unless a formal on-chain governance system is explicitly launched, references to community governance do not create legally binding voting rights.

Operational decisions and significant token-mechanism changes should be communicated through official channels.

15. Risk Disclosure

Cryptocurrency assets are highly volatile and may lose substantial or all of their value. Liquidity can be limited, markets can move rapidly, and smart-contract or infrastructure failures can occur.

performance.

market risk. Users remain responsible for their own research and risk assessment.

16. No Financial Guarantee

Nothing in this whitepaper is a guarantee of profit, price appreciation, liquidity, exchange listing, or future financial performance.

CATPUNK is presented as a digital-asset project and community ecosystem. Participants should make independent decisions based on their own circumstances and risk tolerance.

17. Verification Checklist

Before interacting with CatPunk, verify the official token contract address, liquidity pool address, total

official project links.

Never rely solely on a token name, ticker, logo, or social-media account because unauthorized copies can use identical branding.

18. Conclusion

This long-duration structure is intended to provide a clearer and more gradual supply path while supporting the project's long-term community and ecosystem direction.

19. Official Information

transaction proofs, social channels, and other official links should be inserted here before public distribution of the final whitepaper.

Do not publish placeholder addresses. Replace all placeholders with verified official information only.

Metric	Public Specification
Token	CATPUNK
Total Supply	1,000,000,000

Appendix A ? Tokenomics Specification

Metric	Public Specification
Token	CATPUNK
Total Supply	1,000,000,000 CATPUNK 100%
Liquidity Allocation	1,000,000,000 CATPUNK 100%

Appendix B ? Supply & Liquidity

Total Supply	1,000,000,000 CATPUNK
Liquidity Allocation	1,000,000,000 CATPUNK
Liquidity Share	100%

The complete CATPUNK supply is allocated to liquidity.

End of Whitepaper

This document is informational. Always verify the official token contract, liquidity pool, and transaction data before relying on the stated project information.
